1) The amendment filed 9/05/2006 is acknowledged. Claims 1-5,7 and 8 have been canceled. New claims 9-11 are added.

2) Claims 6 and 9-11 are allowed.

The method for jumping tracks on a double-layer optical disk from a first address A on a first data layer to a target address D on a second data layer, the first address A where the optical head is currently positioned is read, after jumping to the second data layer, a relative second address B on the second data layer that corresponds to the first address A on the first data layer is read, if the second address B on the second data layer is smaller than the first address A on the first data layer, then the address of the second address B on the second data layer is shifted and a new target address is obtained on the second data layer based on this address shift, a calculation function is performed based on the first address A and the new target address, and then the optical head is moved to the new target address on the second data layer, if the second address B on the second data layer is larger than the first address A on the first data layer, then a calculation function is calculated based on the second address B and the target address D, and then the optical head is moved to the target address D on the second data layer, as recited in the independent claims, are not found or suggested in the prior art of record.
